PROFESSIONAL SUMMARY

Software Engineering Manager with extensive experience leading distributed teams to build and scale mission-critical messaging, conversational, and booking platforms. Proven track record modernizing cloud-native distributed architectures, driving PCI/GDPR compliance initiatives, and accelerating delivery cycles across cross-functional Agile organizations. Skilled in bridging deep technical execution (Java, Spring, Python, AWS, Docker) with people-first leadership to maintain top-tier team retention and velocity.

CORE COMPETENCIES

Leadership & Strategy: Engineering Management, Distributed Team Leadership, Agile Coaching (Scrum/Kanban), Technical Roadmapping, Mentorship & Career Pathing, PCI & GDPR Compliance

Languages: Java, Python, JavaScript, SQL, Bash/Shell

Architecture & Infrastructure: Cloud-Native Microservices, RESTful APIs, AWS (DynamoDB, ECS), Docker, Kubernetes, Proxmox VE, CI/CD Pipelines

Data & Testing: NoSQL, Test Automation, Integration Testing, System Monitoring, DORA Metrics

PROFESSIONAL EXPERIENCE

NestEgg.rent — Full Stack Engineer

Remote | 05/2021 – 02/2022

- Architected and deployed scalable full-stack features across client onboarding pipelines, reducing onboarding friction and accelerating customer time-to-value under tight delivery timelines.
- Built robust automated end-to-end and unit testing suites to elevate release confidence, decrease defect escape rates, and streamline production deployments.

Expedia Group

Bellevue, WA | 01/2012 – 07/2020

Engineering Manager

07/2017 – 07/2020

- Led two high-impact, distributed engineering teams responsible for core Messaging & Conversations and the high-throughput Booking Orchestration platform, driving seamless cross-system service integrations.
- Achieved and sustained a Platinum rating on OfficeVibe by establishing transparent delivery cadences, clear career growth frameworks, and high psychological safety across teams.
- Partnered closely with Product and Program management to define technical roadmaps, balance tech-debt reduction with feature velocity, and guarantee full PCI and GDPR compliance across platform services.

Software Development Engineer in Test (SDET) — Expedia Affiliate Network

10/2014 – 06/2017

- Architected and maintained comprehensive automated testing frameworks, cutting end-to-end regression testing time by 30% and significantly accelerating production release cycles.
- Implemented rigorous quality gates and automated compliance validation checks to enforce stringent regulatory and security standards across affiliate partner APIs.

Software Development Engineer (SDE) — Expedia Affiliate Network

01/2012 – 10/2014

- Co-developed a next-generation, cloud-native RESTful API backed by NoSQL data stores, optimizing data retrieval speeds and significantly decreasing user endpoint latency.
- Partnered with multidisciplinary stakeholders and partner integration engineers to translate complex partner feedback into high-performance, developer-friendly API features.

O'Reilly Auto Parts

Springfield, MO | 10/2007 – 01/2012

Senior Programmer Analyst

01/2010 – 01/2012

- Enhanced Omniture SiteCatalyst implementations to capture granular e-commerce telemetry and deliver actionable business analytics.
- Maintained and optimized Vertex tax software integration across retail systems, ensuring accurate multi-state tax computations and reducing audit calculation errors.
- Developed and optimized custom special-ordering modules to streamline internal order fulfillment and enhance customer service delivery.

Programmer Analyst

10/2007 – 12/2009

- Supported and scaled core e-commerce and internal retail systems, improving operational efficiency and platform availability.
- Collaborated directly with business users to translate workflow requirements into stable software features and robust automated test suites.

TECHNICAL & APPLIED PROJECTS

Autonomous AI Research Agent & Self-Hosted Infrastructure — Personal Project

Homelab / Open Source

- Architected a virtualized homelab environment on Proxmox VE utilizing Docker Compose to containerize local open-source LLM runtimes (Hermes/Ollama) and supporting microservices.
- Engineered an autonomous research agent using structured system prompt architectures (SOUL.md), context-window management, and output validation layers to generate deterministic, structured data.
- Integrated dynamic tool-calling and memory persistence pipelines to eliminate context drift during long-horizon research interactions.

Digital Community & Content Delivery Platform — Creator & Developer

12/2016 – 05/2025

- Configured automated streaming pipelines, RTMP integrations, and interactive chat bots to manage an audience community with a 200% follower growth.

EDUCATION

Bachelor of Science (B.S.) in Computer Science — Missouri State University

Springfield, MO
